

REMARKS

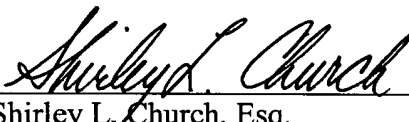

The Notice of Drawings Inconsistency with Specification noted that the drawings which applicants filed on September 23, 2004, were inconsistent between the drawings and the originally-filed patent application specification. The notice pointed out that the patent application specification included Fig. 1, although not accompanied by a Fig. 1., and that the drawings included Fig. 1A, although there was no mention of a Fig. 1A in the patent application specification. Applicants submit that the amendment made to drawing sheet 1 of 5, which deletes the identification as "Fig. 1A" and replaces the identification with "Fig. 1", merely corrects an error in the originally-filed drawing, and that no new matter has been added to the application or drawings as a result of this amendment of Fig. 1. The Examiner is hereby respectfully requested to enter the requested amendment and to pass the subject application to publication.

The Examiner is invited to contact applicants' attorney with any suggestions or questions, at the telephone number listed below.

Respectfully submitted,

Date: September 19, 2006
